waiter, car mechanic, salesman

Certificates: Not relative to my current job
Here its to the [link](#)

Skill Highlights

Creativity	Passionate
Ambitious	Open minded
Adaptive	Can handle high-stress environments

Summary: I have vision and I'm a motivated person. I'm a consistent person.

To Whom It May Concern:

I am an aspiring software engineer looking for a position in which to develop my skill set. I have recently earned an associate of science degree in computer programming, and I am excited to start working in the professional world. I believe that being a junior front-end developer would help me with that goal, and I am also well-qualified for the job.

In the last few months, I have been learning React. Before that, I wrote a Twitter bot using the Puppeteer Node.js library and the Axios REST API. I have extensive experience with HTML and CSS, and I am familiar with SQL and C#. Samples of my code may be found on the linked Github page.

Through my previous work experience as a waiter and a salesman, I have developed good social skills, and I am good at negotiation. As a former mechanic, I solve problems methodically. I have changed my focus to software development because there is always room for creativity and innovation in this field. For these reasons, I am dedicated to improving my craft and eager to learn new skills.

Thank you for your consideration.

Sincerely,
Mehmet Yağız Maktav
